**Magnet Auxiliaries Officer -TKM-015**

|                                       |  |
|---------------------------------------|--|
| <b>Main job</b>                       | Mechanics  |
| <b>Departments</b>                    | TKM/Department for Tokamak   |
| <b>Divisions</b>                      | TKM / Magnet Division  |
| <b>Sections</b>                       | TKM / MAG / Superconductor Systems and Auxiliaries Section   |
| <b>Job Family</b>                     | Project engineering  |
| <b>Application Deadline</b>           | 6/30/2010  |
| <b>Grade</b>                          | P2   |
| <b>Direct employment</b>              | Required   |
| <b>Supervised by:</b>                 | Division Head  |
| <b>Purpose</b>                        | To be responsible for the mechanical analysis and design of the auxiliary systems of the ITER superconducting magnets, including cryogenics, vacuum and insulation.  |
| <b>Main duties / Responsibilities</b> | <ul style="list-style-type: none"> <li>• Produces specifications and designs of the superconducting magnet feeder systems, including piping, manifolding and valves, mechanical supports, vacuum and electrical insulation;</li> <li>• Produces and maintains drawings and design documentation;</li> <li>• Defines and maintains documents for the interfaces with magnets and external systems, including cryoplant, cryostat and vacuum;</li> <li>• Takes responsibility for feeder component integration and definition of assembly and installation procedures;</li> <li>• Completes procurement specifications. Implements quality control programme;</li> <li>• Provides input to schedule, initiates critical advance development items and qualification testing;</li> <li>• Contributes to the monitoring of the Procurement Arrangement with the Chinese Domestic Agency and of the quality control programme;</li> <li>• Develops effective methods for critical acceptance tests, including leak detection, vacuum integrity and high voltage insulation</li> <li>• Maintains a strong commitment to the implementation and perpetuation of the ITER Safety Program, values and ethics</li> </ul> |
| <b>Measures of effectiveness</b>      | Superconducting magnet auxiliary design accepted by review groups.<br>Ability to transfer the design to the Chinese Domestic Agency and its suppliers.<br>Timely delivery of magnet auxiliaries' components.<br>Successful commissioning of auxiliaries for the magnet systems.  |
| <b>Level of study</b>                 | Bachelor or equivalent degree  |
| <b>Level of experience</b>            | 5 to 9 years   |
| <b>Technical experience</b>           | – Minimum of five years of experience in the design and operation of large-scale equipment involving cryogenics, vacuum, high-voltage insulation, and superconductivity<br>– Familiarity with relevant codes and standards<br>– Familiarity with cryogenic and vacuum instrumentation<br>– Experience in manufacture and assembly would be an advantage.   |
| <b>Project experience</b>             | 8 to 10 years  |
| <b>Social skills</b>                  | Ability to work effectively in a multi-cultural environment<br>Ability to work in a team and to promote team spirit<br>Ability to organize and monitor activities<br>Ability to communicate effectively<br>Proactive   |

- Specific skills**
- Computer literate and proficient in the use of the Microsoft Office software suite (Word, Excel, Powerpoint, etc);
  - Working knowledge of CAD and database management software would be an advantage.
- Languages** English (Fluent)
